

The Future of Health Monitoring Isn't Devices. It's Textiles.

Wearable technology is moving from devices we wear
to garments that become the technology.

WHY THIS

Future Fashion - WHAT CLOTHES CAN Actually Do!

Graphene Materials

200 X Stronger Than Steel - More Conductive Than Copper - Odorless - Washable - Antibacterial

Flexible Electronics

Smaller - Printable - Invisible

Consumer Behaviour

Already own smart devices

Artificial Intelligence

AI delivers continuous physiological signals into meaningful health insights.

Next Generation - Woven Textiles We Already Wear.

Emma Mendez

FOUNDER & CEO

Entrepreneur

Enterprise Software

Graphene Strategist

FemTech Founder

I began working with advanced materials and wearable technology for film making. Then built software at KPMG for highly regulated organisations. NOW applying that experience to build intelligent textiles for women's health.

The garment becomes the interface.

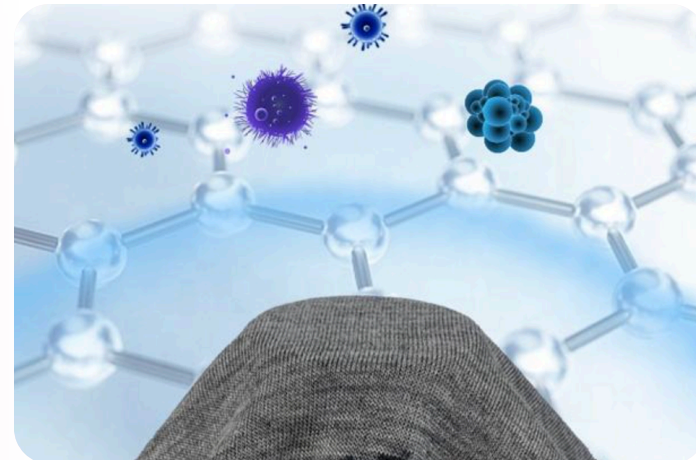

01

Garments

Shapewear, Sportswear, Fashion Forward

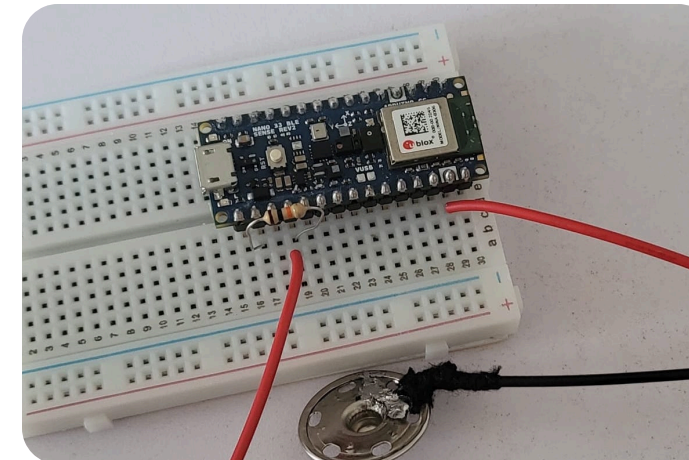

Everyday clothing becomes a passive, non-invasive health interface.

02

Conductive Fabric

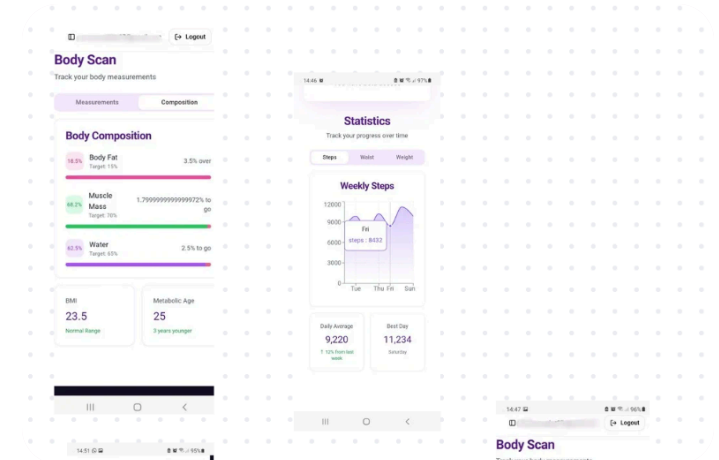

Washable conductive textiles designed to retain sensing performance through everyday wear.

03

Body Intelligence

Capturing the physiological signals women actually want to understand from everyday wear.

04

Insight Platform

AI transforms garment signals into personalised health insights/ A coach built into the clothing itself.

Signal → Insight → Understanding

The next generation of wearables won't be something you **THINK** to wear. It'll be something you already wear.

TODAY'S WEARABLES

- Heart rate, sleep and activity
- General biometric tracking
- External devices you must remember to wear
- Data without everyday context
- Same metrics for everyone

Readouts of basic biometrics that lack deep, personalised context

WHAT WOMEN ASKED FOR

- ✓ Body changes over time
- ✓ Bloating & abdominal changes
- ✓ Cycle patterns
- ✓ Lifestyle & habit insights
- ✓ Personal goals & coaching

Based on interviews and survey responses from 44 women.

Insights That Matter

Our underwear connects to the software and produces insights gathered from our platform, where the IP lives.

Preparing KLPS Commercial Pilots.

Raising investment.

Transforming prototype into manufacturable consumer product

INVESTMENT

Seeking £250,000 SEIS

18 month runway • Product • Validation • Manufacturing

OUTCOME

**Ready for commercial pilots
and first customer revenue.**

USE OF FUNDS

Every pound accelerates KLPS Commercial Launch.

The investment is focused on reaching one objective: a manufacturable product, validated with users and ready for first commercial pilots.

40% £100k

Build

TRL 4-5. University validation, engineers and smart textiles.

25% £62.5k

Manufacture

First 200 garments ready for commercial pilots.

20% £50k

Validate

CRL 6-7. Convert waitlist into paying pilot customers.

15% £37.5k

Protect

Patents, legal, compliance and operating runway.

TARGET OUTCOME

Commercial pilot ready within 18 months.

£250k

Advisors
